

Simplification has limits

No change may be needed / Long tails remain / Source extremes can require more detail

a Physiological monitor data / Mean heart rate

ORDER / ELIGIBLE CHART		E / τ	SCORE	SIZE
1	Bar chart	0.573	97.8	2
2	Dot plot / means	0.573	97.8	2
3	Histogram / 4 bins	0.653	89.1	10
4	Heatmap / 4 bins	0.653	89.1	10
5	Box plot	0.692	89.1	10
6	Interval plot / five-number	0.692	89.1	10
7	Violin plot / 8 grid	0.528	80.4	18

Green: displayed choice. $E / \tau \leq 1$ meets tolerance.
Exact numerical ties use declared catalogue order.

b Kidney disease data / White blood cell count

ORDER / ELIGIBLE CHART		E / τ	SCORE	SIZE
1	Histogram / 4 bins	0.954	96.6	10
2	Heatmap / 4 bins	0.954	96.6	10
3	Violin plot / 8 grid	0.697	93.9	18
4	Dot plot / raw	0.000	0.0	294
5	Bar chart	1.254	0.0*	2
6	Box plot	3.236	0.0*	10
7	Interval plot / five-number	3.236	0.0*	10

Green: displayed choice. $E / \tau \leq 1$ meets tolerance.
Exact numerical ties use declared catalogue order.

c Kidney disease data / Serum potassium

ORDER / ELIGIBLE CHART		E / τ	SCORE	SIZE
1	Histogram / 32 bins	0.890	78.8	66
2	Heatmap / 32 bins	0.890	78.8	66
3	Dot plot / raw	0.000	0.0	312
4	Bar chart	1.634	0.0*	2
5	Violin plot / 16 grid	1.662	0.0*	34
6	Box plot	53.833	0.0*	10
7	Interval plot / five-number	53.833	0.0*	10

Green: displayed choice. $E / \tau \leq 1$ meets tolerance.
Exact numerical ties use declared catalogue order.

Score: percentage reduction in retained values, credited only when the comparison stays within tolerance.
Raw dots = 0 (no reduction). 0* = does not qualify. Equal positive scores: smaller discrepancy ranks first.
All 15 families are documented in Table S3. Eight other-task families are excluded from these scored tables.
